1.2 Characteristics

Characteristic	Value	Description
Туре	SDE1	Pressure sensor
Pressure measuring	-V1, -B2, -D2,	→ 11 Technical data
range	-D6, -D10	
Accuracy	-G2	Accuracy 2 %
Pneumatic connection	-R18 ¹⁾	Male thread R1/8
and mounting	-R14 ¹⁾	Male thread R1/4
	-MS4	For adapting to MS4-series service units
	-MS6	For adapting to MS6-series service units
	-H18	Relative pressure, female thread G½, H-rail mounting
	-W18	Relative pressure, female thread G½, wall or surface mounting
	-FQ4	Push-in connector QS-4, front panel mounting
	-HQ4	Push-in connector QS-4, H-rail mounting
	-WQ4	Push-in connector QS-4, wall or surface mounting
Display	-C	LCD display with backlighting
	-L	Illuminated LCD display

Characteristic	Code	Type designation
Electrical output	-P1	1 switching output PNP
	-P2	2 switching outputs PNP
	-PU	1 switching output PNP and 010 V analogue
	-PI	1 switching output PNP and 420 mA analogue
	-21	2 switching outputs PNP and 420 mA analogue
	-N1	1 switching output NPN
	-N2	2 switching outputs NPN
	-NU	1 switching output NPN and 010 V analogue
	-NI	1 switching output NPN and 420 mA analogue
Electrical connection	-M8	M8 plug connector
	-M12	M12 plug connector
Electrical accessories	-G	Straight socket, cable 2.5 m
	-G5	Straight socket, 5 m cable
	-W	Angled plug socket, 2.5 m
	-W5	Angled plug socket, 5 m cable

1) For example, for mounting on an MS- or D-series service unit

Fig. 2

2 Security

Intended use

The pressure sensor SDE1 is intended for monitoring pressure in piping or terminals.

General safety information

- The product may only be used in its original status without unauthorised modifications.
- Only use the product if it is in an excellent technical status.
- The product is intended for use in industrial environments. Measures may need to be implemented in residential areas for radio interference suppression.
- Take into consideration the operating conditions at the location of use.
- Observe the specifications on the rating plate.
- Comply with all applicable national and international regulations.

Disposal

- Observe the local specifications for environmentally friendly disposal.

Range of applications and certifications

In combination with the UL mark on the product, the information included in this section is also applicable for compliance with the certification requirements of Underwriters Laboratories Inc. (UL) for USA and Canada. Observe the following English-language remarks from UL:

UL approval information	
Product category code	NRNT2 (USA) NRNT8 (Canada)
File number	E253738
Considered standards	UL 508, 17th edition, C22.2 No. 14-95
UL mark	c FL us

Fig. 3

Only for connection to an NEC/CEC Class 2 supply. Raccorder uniquement a un circuit NEC/CEC Classe 2.

Technical data	
Max. surrounding air temperature	50 °C / 122 °F

Fig. 4

This device is intended to be used with a Class 2 power source or Class 2 transformer in accordance with UL1310 or UL1585.

As an alternative, an LV/C (Limited Voltage/Current) power source with one of the following properties can be used:

- This device shall be used with a suitable isolating source such that the maximum open circuit voltage potential available to the product is not more than 30 V DC and the current is limited to a value not exceeding 8 amperes measured after 1 minute of operation.
- This device shall be used with a suitable isolating source in conjunction with a fuse in accordance with UL248. The fuse shall be rated max. 3.3 A and be installed in the 30 V DC power supply to the device in order to limit the available

Note that, when more than one power supply or isolating device is used, connection in parallel is not permitted.

3 Function and application

The pressure sensor SDE1 converts pneumatic pressure values into electrical signals. Measurements are carried out using a piezoresistive sensor element with a following electronic evaluation unit. Depending on the type, interfacing to the higher-level systems is provided by 1 or 2 switching outputs and an analogue output. Depending on the type and application, the differential pressure or relative pressure is measured.

The switching outputs can be configured as normally closed or normally open contacts. The switching points can be determined as threshold value or window comparator.

3.1 Operating statuses

Operating status	Function	
RUN mode	- Basic status after the operating voltage is switched on	
	Display of the current measured value	
SHOW mode	- Display of the current settings	
EDIT mode	- Setting or modification of parameters	
TEACH mode	Acceptance of the current measured value to determine switching points	

Fig. 5

3.2 Switching functions

Threshold value comparator for monitoring of a pressure threshold

Threshold value comparator for monitoring of a pressure threshold			
Function	NO (normally open)	NC (normally closed)	
Switching function: - 1 switching point (SP) TEACH mode: - 2 teach-in points (TP1, TP2) - SP = ½ (TP1+TP2)	Out HY TP1 SP TP2	Out 1 HY 0 TP1 SP TP2	

Fig. 6

Window comparator for monitoring of a pressure range

Function	NO (normally open)	NC (normally closed)	
Switching function: - 2 switching points (SP _{min} , SP _{max})	Out HY HY 1- HY HY	Out 1-HY HY HY	
TEACH mode ¹⁾ : - 2 teach-in points (TP1, TP2) - TP1 = SP _{min} , TP2 = SP _{max}	0 TP1=SP _{min} TP2=SP _{max}	0 p TP1=SP _{min} TP2=SP _{max}	

 SP_{min} = smaller pressure/vacuum value, SP_{max} = larger pressure/vacuum value, dependent on the Teach sequence

Fig. 7

4 Installation

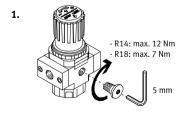

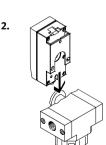

Installation to be carried out only by qualified personnel in accordance with the operating instructions.

- Remove all transport packaging. The material used in the packaging has been specifically chosen for its recyclability.
- Install the sensor so that condensation from the compressed air lines cannot collect in it.

4.1 Mechanical

SDE1-...-R14/-R18

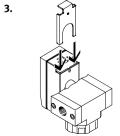

Fig. 8

SDE1-...-H

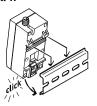

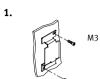

Fig. 9

SDE1-...-W

Wall mounting hole pattern → Fig. 32

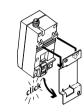

Fig. 10

SDE1-...-FQ4

- Size of the front panel cut-out in mm → Fig. 11
- 1. Guide sensor from the front into the cut-out on the front panel.
- 2. Attach the clamping plate and press until the fastening slide clips in.

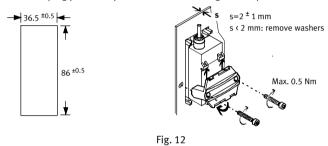

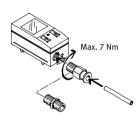

Fig. 11

4.2 Pneumatic

SDE1-...-H18/-W18

SDE1-...-HQ4/-WQ4/-FQ4

- Insert tube (outside diameter 4 mm) into the push-in fitting.
- Observe connection of p1 and p2 (relative pressure p1 / differential pressure p1 - p2).

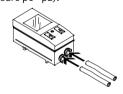

Fig. 13 Fig. 14

4.3 Mechanical and pneumatic (SDE1-...-MS4/-MS6)

The sensor can be mounted to the following MS-series devices:

- DE, DL, EE, EM1, FRM, LFR, LR, LRB

Mounting adapter

- 1. Seal either the trunnion (a) or drill hole (b) with O-ring.
- 2. Push the mounting screws at the mounting brackets outwards and tighten.

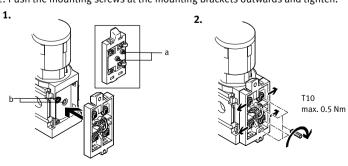

Fig. 15

Mounting sensor

The sensor can be rotated 180°.

- Check moulded seal (c) for proper seating.
- Make sure the sealing surfaces between the sensor and adapter are clean.

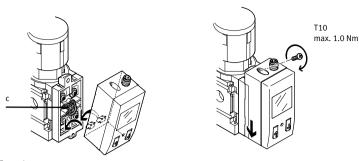

Fig. 16

4.4 Electrical

Warning

Use only power sources which guarantee reliable electrical isolation of the operating voltage in accordance with IEC/EN 60204-1. Consider also the general requirements for PELV circuits in accordance with IEC/EN 60204-1.

- Connect sensor.
- Maximum permissible cable length: 30 m
- Maximum tightening torque of plug connector: M8 = 0.3 Nm, M12 = 0.5 Nm

SDE1-... (1 output)

Commissioning 5

Commissioning is to be carried out only by qualified personnel in accordance with the operating instructions.

5.1 Symbols on the display

The design of the display is type-dependent.

Туре	SDE1C	SDE1L	
Description	LCD display with backlighting	Illuminated LCD display	
Display	SP mm NC SP mm	OutA OutE	

Fig. 21

Symbols on the SDE1C	display SDE1L	Description
Out A Out B	Out A Out B	Switching output OutA / switching output OutB
— / <u>—</u>	— /—	Switching output set / not set
		Threshold value comparator
л	_N_	Window comparator
[SP]	5P	Switching point
[SP] [min]	5P.L	Lower switching point
[SP][max]	5P.H	Upper switching point
[HY]	HA	Hysteresis
[NO]	ND	Contact (normally open)
[NC]	חב	Contact (normally closed)
[min]	P.L o	Minimum measured pressure since switch-on or the last reset
[max]	P.H.	Maximum measured pressure since switch-on or the last reset

Symbols on the displayC	isplay SDE1L	Description
[lock]	[lock]	Security code active (blocked against unauthorized parameterisation)
	■■■■□□□□□□	Segments illuminated: Graphic display of the cur- rent measured value related to the maximum meas- ured value of the measuring range
[min] [max]		Display flashes: Minimum/maximum value is reset.
-	00000	Segments flash: Hysteresis value is displayed.
-		Segment 5 flashes: Value of switching point SP or SP.L is displayed.
-		Segment 8 flashes: Value of switching point SP.H is displayed.
-) 	Segment 1 flashes: Minimum value min or P.Lo is displayed.
-		Segment 10 flashes: Maximum value max or P.Hi is displayed.

Fig. 22

5.2 Switch on sensor (RUN mode)

- Switch on the operating voltage.
- → The current measured value is displayed. The sensor is in the basic status (RUN mode).

The basic status can be reached from other modes through:

- pressing Edit button for 3 seconds
- expiration of a monitoring time (Timeout)

5.3 Displaying parameters (SHOW mode)

Requirement: The sensor is ready for operation (RUN mode).

- Press the A-key for switching output OutA or the B-key for switching output OutB.
 - → The first parameter is displayed.

The respective subsequent parameter can be displayed by pressing the A key or B key (menu structure → Fig. 23).

Menu structure for SHOW mode

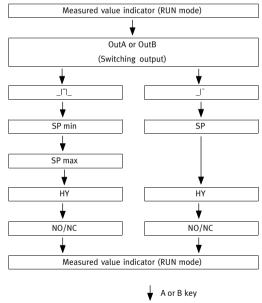

Fig. 23

5.4 Displaying minimum/maximum value

Requirement: The sensor is ready for operation (RUN mode).

- 1. Press the A key and B key simultaneously.
 - → The lowest pressure value since the last switch-on or reset is displayed.
- 2. Press the A key and B key simultaneously.
 - → The highest pressure value since the last switch-on or reset is displayed.
- 3. Press the A key and B key simultaneously.
 - → Switch to the RUN mode.

The following options exist for resetting from the minimum and maximum values:

- Press the A key and B key simultaneously for longer than 2 seconds.
- Switch off the operating voltage.

5.5 Configuring switching output (EDIT mode)

Vote

Changing the switching behaviour of the switching outputs in the EDIT mode is effective immediately.

The process is the same for configuring the switching outputs for OutA and OutB. In the following, the process is described using the switching output OutA (menu structure → Fig. 24).

Requirement: The sensor is ready for operation (RUN mode).

- 1. Press the Edit button.
 - → If the security code is activated: [Lock] flashes.
- 2. Enter security code set with A key or B key.
- 3. Press the Edit button.
 - → The parameter entry option is unblocked. [OutA] flashes.
- 4. Press the Edit button.
 - → [_I¯I_] or [_I¯] flashes.
- 5. Select the switching function with the A key or B key.
- 6. Press the Edit button.
 - → The next adjustable parameter flashes.
- 7. With A key or B key, select the parameter or value.
- 8. Repeat points 6 and 7 until all parameters are set.
- 9. Press the Edit button.
 - → Switch to the RUN mode.

5.6 Set the display unit and security code (EDIT mode)

Requirement: The sensor is ready for operation (RUN mode).

- 1. Press the Edit button.
 - → If the security code is activated: [Lock] flashes.
- 2. Enter security code set with A key or B key.
- 3. Press the Edit button.
 - → The parameter entry option is unblocked. [OutA] flashes.
- 4. With the A key, select the unit bar.
 - → [lock], [kPA], [psi] and [bar] flash.
- 5. Press the Edit button.
 - → The currently set unit flashes.
- 6. Select the unit with the A key or B key.
- 7. Press the Edit button.
 - → [lock] flashes.
- 8. Enter security code with A key or B key. With [O], the security code is deactivated
- 9. Press the Edit button.
 - → Switch to the RUN mode.

5.7 Teach switching points (TEACH mode)

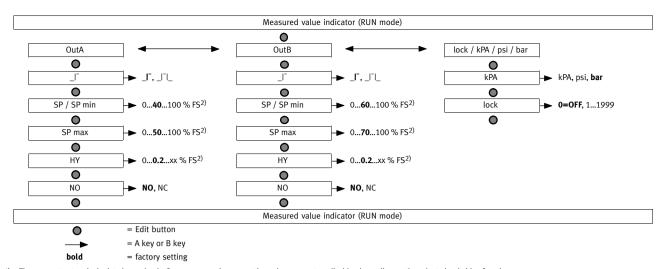

The process for teaching is the same for configuring the switching outputs for OutA and OutB. In the following, the process is described using the switching output OutA.

Requirement: The sensor is ready for operation (RUN mode).

- 1. Determine switching function
 - (→ 5.5 Configuring switching output (EDIT mode)).
- 2. Create pressure value 1.
- 3. Press the A key for the switching output OutA and also the Edit button. With active security blocking: [lock] flashes.
- 4. Enter security code set with A key or B key.
- 5. Press the Edit button.
 - → The parameter entry option is unblocked.
- → The current pressure value will then be adopted as the first teaching point (TP1). [OutAl flashes.
- 6. Create pressure value 2.
- 7. Press the A key for the switching output OutA and also the Edit button.
 - → The current pressure value is adopted as the second teaching point (TP2).
 - → Switch to the RUN mode.

Menu structure EDIT mode1)

-) The menu structure is depicted completely. Some menu options or setting values are not applicable, depending on the selected switching function.
- 2) The values refer to the respective measuring range. The display takes place in the selected unit.

Fig. 24

6 Operation

Property damage due to high temperatures.

Extreme pneumatic conditions (high cycle rate with large pressure amplitude) can heat the device over 80 $^{\circ}$ C.

Select the operating conditions (in particular the ambient temperature, pressure amplitude, cycle rate, current consumption) such that the device does not heat up above the maximum permitted operating temperature.

Restore factory settings

Restoring the factory settings causes the current settings to be lost.

- 1. Switch off the operating voltage.
- 2. Keep the A key and B key pressed down simultaneously.
- 3. Switch on the operating voltage.
- 4. Additionally press the Edit button.
 - → All parameters are reset to the factory settings.

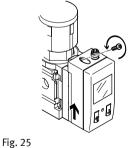

7 Maintenance and care

- 1. Switch off the energy sources (operating voltage, compressed air).
- 2. Clean sensor with non-abrasive cleaning agents.

8 Disassembly

- 1. Switch off the energy sources (operating voltage, compressed air).
- 2. Allow the sensor to cool off.
- 3. Separate connections from the sensor.
- 4. Loosen the mountings → Fig. 25 to Fig. 28
